## How to Choose a Vacuum

special filter for allergies or asthma. Include any accessories or tools you use with your current vacuum that you really like, and also highlight any you wish to have included with your new vacuum.

Thinking about replacing your vacuum? Well, shopping for a vacuum is similar to car shopping. Would you buy a car without a test drive? Would you purchase a car without knowing what accessories were included, what type of warranty was provided, or how well it performed during independent testing? You would probably even be interested in customer satisfaction ratings too.

Do some research before you go. See what information you can find online about various brands, their models, and warranties. Make a list of features that are important to you such as fingertip controls, variable suction control, ability to change out tools easily, size and cost of replacement bags, etc.

Add to your list your cleaning requirements such as thick carpet, hardwood floors, lamp shades, etc. Make sure to highlight if you need a

**MOST IMPORTANT:** Avoid “Big Box” stores that force you to buy a vacuum by grabbing a carton off a shelf without allowing you the opportunity to fully test the vacuum (including the tools and accessories) on a variety of surfaces. At Rocky Mountain Sewing and Vacuum, we allow you to fully test the models we carry. Our sales people have been trained to listen to your needs and recommend the best model to meet your cleaning needs. Remember we really want you to be satisfied with your purchase.

Also, at RMSV we provide vacuum maintenance for your vacuum – even something as routine as changing a belt. We want to establish a relationship with you so you will be comfortable bringing your vacuum in for that routine service. We offer a service package to keep your vacuum working year to year. You won't get that from a “Big Box” store!

# Real Life Vacuum Testimonial

I started my career in the vacuum industry over 20 years ago, and I have sold Miele and Riccar vacuums since the beginning. Miele, Riccar and SEBO are brands well known for their quality deep cleaning vacuums built to last. (I still have one I purchased for myself way back when and use in my man-cave - and it works great!) I would like to share with you a recent experience. As you read it, reflect on your current vacuum and **how clean you think YOUR carpet is...**

A while back, I helped a friend move into a new apartment. The carpets had been professionally cleaned after the last tenant vacated. They looked great. The carpet had been vacuumed and shampooed beautifully! Well, knowing what I do about vacuums and how they are typically surface cleaners, I couldn't resist giving the floors a quick once over, just for fun, with one of the premium vacuums that we carry. After I was finished, and being the vacuum nerd that I am, I figured it would be interesting to cut the bag open to see what was inside. I was SHOCKED! As you can see from the picture there was black dog hair, a TON of dirt, and other strange things in the bag. How could this be? This carpet had LOOKED really clean! Even I was surprised to see the amount in that vacuum bag. Obviously, the type and brand of vacuum really does make a difference!!

If you are using a surface cleaning vacuum like a Shark or a Dyson, I guarantee you, too, have unwanted surprises hiding in your carpet. Anyone with carpet should consider a deep cleaning vacuum such as a **Miele, SEBO, or Riccar**. Tests have shown that having a deep cleaning vacuum helps with allergies, asthma, and other health issues, PLUS it extends the life of your carpet!

*Come into your local Rocky Mountain Sewing and Vacuum store TODAY and let our staff show you our selection of deep cleaning vacuums. Trade in that surface cleaner for a deep cleaner and get the clean you expect from a vacuum.*

**Rob Richards**  
— RMSV Owner

“ The Team at RMSV went out of their way to help us with our broken vacuum. They even took the time to call the vacuum “expert”, who gave us a couple ideas on what might be wrong... and he was right! We will be buying from RMSV, they really know their stuff! ”

— Bridget, Littleton, CO

“ I have purchased 3 sewing machines from Rocky Mountain Sewing and Vacuum and 2 vacuums. Service and assistance has been excellent. A drop in for help is always quickly completed by a very knowledgeable staff. ”

— Brenda, Littleton, CO

“ The sales staff were excellent, very knowledgeable and helpful. Wide range of vacuums, at all price levels. I absolutely love my vacuum, and would highly recommend RMSV! ”

— Marla, Aurora, CO

“ The service was exceptional. RMSV bent over backwards to be sure I got what I needed, even pulling up accessory packages between vacuum models and printing them out so I could compare units in their store. I haven't experienced customer service like that in decades. ”

— Todd, Littleton, CO

## Riccar Tandem Air Technology: What is it?

With Riccar's top-of-the-line vacuum cleaners, you'll experience a clean unlike any other. Tandem Air Technology combines two technologies for exceptional carpet cleaning, strong suction for attachments and advanced HEPA media filtration - all in one vacuum.

### How It Works

Most vacuums have either a clean air motor or a direct air motor. Each motor and type of technology has its strengths.

Clean air technology sucks the air through the filter, bringing dirt along with it. It's great for advanced filtration and for cleaning with attachments.

Direct air technology agitates carpet fibers, releasing dirt particles. It's well-suited for carpet cleaning.

Tandem Air vacuums have both types of technology that work together - in

tandem - to pull up deep-down dirt and lift it up and into the bag where it's trapped in multiple layers of HEPA media filtration. And you won't suffer low tool suction for this advanced level of cleaning. The result is a level of clean you've never seen.

You'll find the revolutionary and exclusive Tandem Air Technology in the Riccar Radiance and Brilliance uprights. Ask for a Tandem Air demonstration. You'll quickly see why every other vacuum with either a clean air motor or a direct air motor is no match for both motor systems in one machine.

### Riccar Testimonial:

*"I just love my Riccar Radiance Premium. With an active household of 3 boys that play sports and a big dog, I am always vacuuming. My favorite feature besides the long reach I get with the vacuum is the lights on the front (Heads Up dirt sensor) that let me know I got up all the dirt from my carpet. It's the best!"*

-Sherry, Arvada, CO

## RICCAR R30D Brilliance Deluxe

The R30D Brilliance now sports a new look with a built-in carry handle and a rich, new color. It features the revolutionary Tandem Air System and multi-stage filtration including HEPA media and charcoal filters to trap allergens and odors. A self-sealing HEPA media bag makes bag changing simple.

- 5-year warranty
- Made in the USA with globally-sourced parts

With a lifetime belt and metal parts in high-wear areas, it's built to last for years of cleaning carpets, rugs and bare floors. A telescopic aluminum wand with stretch hose and on-board tools give you the power to reach up to 17 feet for cleaning floor to ceiling and everything in between.

## RICCAR R40P Radiance Premium

- Two motors work in tandem for unsurpassed cleaning performance
- Stainless steel bottom plate
- Extruded aluminum brushroll with 3 rows of replaceable brushstrips
- Brushed aluminum handle tube
- Twin sets of LED headlights
- 100% sealed HEPA Plus media system with 7 layers of filtration
- Granulated charcoal filter to capture odors
- HEPA media self-sealing bag
- Lifetime belt with Hall sensor protection
- Heads up dirt sensor
- Surface selector on handle
- Extra-long stretch hose and telescopic wand
- 40' cord
- Deluxe dusting brush, crevice tool and upholstery tool
- Full bag and replace filter indicator lights
- 6 Position carpet height adjustment
- 5 Year warranty
- Red Carpet Service Plan
- Made in the USA with globally sourced components

## RICCAR R25 Series

**Dirt Sensor** - As soon as deep down dirt is gone, the amber light turns off, letting you know you can move on.

**Lifetime Belt Protection** - When a jam is sensed, the brushroll stops until it's cleared, saving you from unexpected belt changes.

**Full Bag Sensor** - Lights up to indicate that it's time to change the bag, eliminating guesswork.

**360° Turning** - Turns on a dime, every time maneuvers through your home with ease.

**HEPA Media Bag** - Breathe easier! Multiple layers of filtration pick up and lock in harmful allergens, dust and even pet dander.

**R25 Deluxe**

**R25 Standard**

**R25 Pet**

Advanced cleaning machines ideal for both bare floors & carpet.

- ABS plastic body
- Durable components stand up to daily use

## Portable Vacuums

Handheld and portable vacuums can be great for quick clean up of spills, furniture and stairs. They are also very useful to keep in your crafting space to keep it tidy or to clean your car or RV.

### RICCAR SupraQuik Portable Canister

The SupraQuik is a portable canister vacuum that's perfect for cleaning cars, stairs and rugs. Comes with mini-tools, strap and a long cord for vacuuming on-the-go!

- 700 watt motor
- Odor absorbing charcoal filter and twin ply electrostatic bag
- Shoulder strap
- 4.5 pounds
- Tools include 2 wands, floor tool, flexible hose, dusting brush, crevice tool and upholstery tool
- Micro tool set included
- 25' cord

### RICCAR GEM

Powerful and lightweight handheld vacuum includes micro tools for cleaning keyboards, printers, cars, electronic equipment and much more!

- Upholstery brush with nylon bristles
- Crevice tool with detachable nylon bristled brush
- Dusting brush with nylon bristles
- Flexible hose

# Canister vs. Upright – Which is Right for Me?

Vacuums come in 2 distinct types: Canister and Upright. Most of us tend to just go with the familiar, what we grew up with, what our mom used. Yet, when you decide to either buy your first vacuum, or replace your old one, you should be aware there are significant differences between the canister type and the upright type.

Uprights are the type most of us think of when we imagine a vacuum cleaner. More uprights are sold in the United States than other types of vacuums. But does the upright design really meet your cleaning needs? It is a tall, straight rigid unit with either a huge dust bag or collection chamber, large cleaning head, long cord that wraps around the unit for storage, and it's heavy. It was designed for to move easily and freely on large open areas of carpet.

The power head was specifically designed to effectively loosen and remove most of the dirt embedded in your carpet. You can easily tuck the upright in a closet or a corner when you are not using it.

But what about other surfaces, stairs, drapes, etc.? You're thinking "my upright came with hoses and tools to clean those other spaces". However, those hoses and tools are afterthoughts – not integrated into the design of the unit. Attaching the hoses and tools often is awkward on an upright. Moving the upright around with those hoses and tools attached is difficult. Plus, an upright can be heavy - making it very difficult to carry up and down stairs if you live in a multi-story house.

Now let's look at a canister vacuum. The canister vacuum has a main tank like unit with a long, flexible hose attached to a rigid (typically metal), tube wand connected to the removable powerhead or hard floor brush, a retractable cord, and built in storage for the integrated tools.

Canisters are lighter in weight than an upright, thus making them easier to transport from one level of your home to another.

Canister vacuums are designed to be versatile, to effectively clean a variety of surfaces and areas. Canisters perform efficiently and conveniently on hard surfaces, walls, drapes, windowsills, lampshades, furniture, stairs, etc., with little frustration. And it is possible to get the same carpet cleaning power of a good upright by making sure your canister has a motorized powerhead included.

**So which is better?** If you have limited furniture pieces with expansive areas of wall to wall carpeting, then you will really appreciate an upright. It was designed for exactly that type of cleaning. If you need to clean a variety of different surfaces and areas with ease and want portability plus great cleaning performance on all those different areas, then a

canister is probably best. Also, a canister is more maneuverable in tight spaces or homes with more furniture pieces.

Ultimately, the choice between an upright and a canister vacuum is up to you; whatever you are comfortable with is the right choice. When selecting your next vacuum, keep your cleaning needs and habits in mind. Come in to Rocky Mountain Sewing and Vacuum and try different models of each type before you settle on one. Make sure you actually try using the various included tools and hoses. Remember, most "big box" discount stores sell directly off the shelves and don't allow you to test before you buy. And if your biggest motivation is something as simple as a retractable cord, you'll benefit from trying before you buy!

# The Vacuum View

## Simplicity - Budget Conscious Vacuums

Your vacuum should be a durable cleaning machine. To guarantee this, Simplicity Vacuums have metal components in all the right places. Many models have HEPA media filtration, too. That means every time you vacuum with Simplicity you'll also breathe a little easier.

No matter what type of home you have, there's a Simplicity for you. If you have a lot of stairs or large rooms, a lightweight vacuum is a great choice. Need something for hard to reach places? Choose a vacuum with lots of attachments. Does your

home have more throw rugs than carpet? A canister vacuum might be the best choice. With Simplicity, you'll transform your home into a tidier, happier place.

### Simplicity® S65 Cordless

VACUUMS

Lightweight, cordless vacuum is perfect for cleaning bare floors and rugs. Remove the wand, and use as a handheld vacuum with up to 25 minutes runtime. All models come with a combination dusting brush/crevice tool, charging base, 21.6-volt lithium-ion battery and battery charger, wall bracket and HEPA media filter. The carpet nozzle features bright LED lights, brushroll and is gentle on floors.

Thread  
will not tangle  
in this  
brushroll!!

### Simplicity® S20EZM

VACUUMS

Want a great value on a HEPA media vacuum with extra-long reach and power? Look no further than the S20EZM. Its quick-draw wand and on-board tools make above-the-floor cleaning simple, and its metal brushroll, handle tube and wand are made to last. Plus it carries the Gold Seal of Approval from the Carpet and Rug Institute.

- Aluminum Telescopic Wand
- HEPA Media Bag
- Gold Seal of Approval
- HEPA Media Filter
- Onboard Tools

### Simplicity® Jill Compact Canister

VACUUMS

She's small in size but big on power! Jill cleans small spaces with bare floors beautifully and traps dust particles in her HEPA media bag and filter.

- Full Bag Indicator
- HEPA Media Filter Lightweight - It's only 9 pounds!
- HEPA Media Bag - Traps particles in the bag when vacuuming.
- Bonus Tools - Includes a bonus floor tool with soft-as-a-lamb micro fiber pad.

# Bagged vs. Bagless – Which is Better?

In recent years bagless vacuums have made a big surge in the vacuum world due to the convenience of not having to replace the dust bag when it becomes full. Just empty the canister of debris and you are ready to vacuum again. The conventional thinking behind owning bagless vacuums is that they are more convenient than bagged machines, are less expensive to own because you are not buying bags, and are more environmentally friendly than bagged vacuums. Washable filters and the ability to clean out the dust container as needed (especially after vacuuming up a valuable that you need to retrieve) are also features that appeal to consumers.

**What is the down side to a bagless vacuum?** For some consumers, emptying the dust container can be a messy experience and then having to wash the container and the filters after cleaning the floors is not an appealing thought. Additionally, washable filters are not really washable. You can rinse them under the faucet, but much of the dirt remains in the filter. They are much like a kitchen sponge; you can try to wash them as much as you want, but ultimately you will need

to replace them often. Clogged filters will reduce suction power and having to continually buy new filters can be expensive. Filters on bagless vacuums need to be replaced at least once a year, and the cost of doing so is often far more than the cost of replacing bags once every couple of months. Also the filtration is not as good on a bagless vacuum because they are not a totally sealed system. If someone in your household suffers from allergies, the recirculating particulates in the exhaust air and what may leak from around the canister will likely bother their allergies.

The airborne dust particles that come from the bagless container being emptied move through several rooms of your house quickly. Little to no dust particles are expelled from a sealed system in a bagged vacuum, which means these vacuums are far better at helping minimize the dust in the air that can trigger allergic reactions.

Other positives for the bagged vacuums is that they most often use a HEPA filter to capture more allergens and other airborne particles. In order to earn the name “HEPA,” the filters have to go through rigorous testing to

ensure that they can capture at least 99.97% of particulates 0.3 microns or larger. HEPA filters are known to remove more dust and pollen from the air than any other type of filter available, especially in vacuum cleaners. In addition, while most bagless filters use a lot of plastics that are not good for the environment, many bag manufacturers now use materials that are biodegradable, thus making them a better choice if you are environmentally conscious.

**In the end, buying bags for your vacuum is cheaper, cleaner, and better for the environment than buying filters.**

In making your decision as to which vacuum is the right choice for you, it really comes down to knowing what you need and want in a vacuum cleaner. By weighing each of these pros and cons, you'll have a better idea of whether a bagged or bagless vacuum is better for you and your home.

# The Vacuum View

## Why SEBO?

SEBO America has been located in the greater Denver area for the past 20 years. Worldwide, SEBO has been around for 40+ years and their vacuums have always been made in Germany.

SEBO believes that vacuums with bags have better filtration therefore, all of their vacuum models have filtered bags. S-class, hospital-grade filtration, is the standard that all SEBO vacuums live by. The S-class standard requires filters to absorb greater than 99.9% of particles down to 0.3 microns in diameter. For comparison, 100 microns is the

diameter of a human hair. SEBO filters have a relatively open texture that allows smoother airflow for better suction performance, a longer life expectancy, and they cost less than HEPA filters. SEBO vacuums are extremely durable and easy to use and therefore make a great addition to your clean house regimen. – Jeff Merrill, SEBO

### Airbelt E3 Premium Arctic White

- **Warranty:** 5 years bumper-to-bumper. 7 years motor warranty. 5 year belt warranty.
- 37' cleaning radius (power cord and hose assembly)
- Flat-to-the-floor 3 1/2" profile
- Manual height adjustment with 4 settings on power nozzle
- Full bag indicator with thermal reset and automatic brush shutoff
- 25' power cord with cord rewind
- Easy brush removal & cleaning
- Rubber wheels and bumpers
- Clog access door
- Suction control on handle
- Soft start motor
- Hospital-grade filtration

### Felix Rosso

- Warranty: 5 years bumper-to-bumper, 7 years motor warranty
- Instant-use suction hose
- Flat-to-the-floor 6" profile

- Straight suction vacuum with turbo head and parquet brush
- Included: turbo nozzle, parquet brush, dusting brush, crevice and upholstery nozzles
- The AIRBELT E2 turbo cannot accommodate an electric power head
- Suction adjustment switch on canister body
- A flat-to-the-floor 3¼" profile
- Mid-size canister vacuum
- Durable and maneuverable

# The Vacuum View

## Why Filtration is Important for You and Your Vacuum

**Dave Lange, RMSV Vacuum General Manager**

When it comes to purchasing a vacuum, it can get confusing to differentiate between marketing gimmicks and factors that genuinely affect how well your machine performs. A huge buzzword that we see thrown around today is filtration – especially when you look at the packages for vacuums available at the big box stores. But how important is filtration, and how do you know whether your vacuum has good filtration?

Without good filtration, vacuums would just throw the dirt that they vacuumed up right back into the air. Of course, a vacuum cleaner filtration system is only as good as the largest particle that it lets through. The smaller the particle that the filter blocks, the cleaner the air you breathe.

Despite the advertising that we see from bagless companies, bagged machines tend to provide better filtration than bagless vacuums. Check out our blog, **It's In the Bag! Allergy Sufferers, Get a Bagged Vacuum Cleaner for all the reasons you might want to invest in a good vacuum that uses a bag.**

Consider that every time you change a bag on the bagged vacuum, you are essentially putting a new filter on the machine.

**Okay, you like your bagless vacuum, so what about filtration for those types of vacuums?**

Bagless vacuum manufacturers tend to focus on the fact that you don't need to change bags on a their vacuums. However, they don't always mention that you do need to change filters at least once a year in order to keep your

vacuum filtering the air effectively. If you don't change the filters on their bagless vacuums very often (if at all), the dirt continues to fill up the filter until the vacuum is just spewing tons of dirt back in the air.

So which machines provide the best filtration? Ultimately, only a few vacuums actually measure zero particles through the exhaust ports and they are all bagged machines. The best-filtering machines are those that have multiple levels of filtration; in most cases, they will have a HEPA bag, a prefilter, and a HEPA exhaust filter all working together to provide the highest levels of filtration.

So how is your vacuuming filtering? Examine your filters to see how dirty they are.

### **For bagged vacuums:**

- Make sure you are changing your bags at least once every two months.
- If your exhaust filters appear black, it is definitely past time to replace them
- If they appear gray, you will want to plan to change them in the near future.

For bagless vacuums, replace your filters a minimum of once a year. Just be aware that even if you keep up on the filter replacement, it is likely that your vacuum is still throwing dust back in the air.

Our ultimate recommendation, if you are looking for the best filtering vacuums, is to choose a bagged machine with high quality exhaust filters.

So, if you are concerned about the quality of the air in your home after you vacuum, come see us and let us show you some of the best vacuums that will meet your vacuuming AND filtration needs.

# Check Your Belt & Brush!

Most vacuum cleaners have a brushroll which is turned by a belt. Stiff brushes on the roll and vibration from the vacuum provide necessary agitation to deep clean your carpet. After about 3 to 6 months, the belt has stretched out, especially in our dry Colorado air. This means the brushroll turns slowly, or sometimes not at all. The suction from the vacuum will still pick up surface litter, but you will lose deep cleaning power. This can cause dirt buildup in the base of your carpet and will lead to excessive carpet wear. It doesn't take long to change a belt, but it can save you hours of cleaning and effort. Our Rocky Mountain vacuum experts are happy to help you find the proper belt and can even install it too!

**NEVER CHANGE A BELT AGAIN!**

**Ask us how!**

## Vacuums have Preventative Maintenance

**Just like your car,** a vacuum cleaner is a machine, just like any other appliance in your home. Proper maintenance is required to help keep it working as efficiently as possible. Replacing a vacuum can be expensive. Here are some quick and painless tips to help keep your vacuum performing its best:

- ✓ Empty bagless models often
- ✓ Always replace your vacuum bag once it is 3/4 of the way full
- ✓ Make sure the bag is attached properly
- ✓ Check the filters and the hose
- ✓ Check the belt every 3-6 months
- ✓ Replace the belt once a year, regardless of whether it is broken
- ✓ Clean the brush roll
- ✓ Take your vacuum to the vacuum doctor for annual check ups

**FREE
